INTRODUCTION

API Abdul Kalam is a renowned Indian Scientist who went on to become 11th President of India (2002-2007). He is very well known across India and is a recipient of India and three highest civilian awards - Padma Bhushan, Padma Vibhushan and Bharat Ratna. Wings of Fire is an autobiography of APJ Abdul Kalam written jointly by Arun Tiwari and Abdul Kalam. It covers Kalam's life before he became president of India and in 2013 another autobiography titled "My Journey: Transforming Dreams into Actions" was released.

WINGS OF FIRE - By APJ Abdul Kalam

Wings of Fire is an autobiography / autobiography of APJ Abdul Kalam covering his early life and his work in Indian space research and missile programs. It is the story of a humble boy from a humble background who went on to become a key player in Indian space research / Indian missile programs and later became the president of India. The book has been very popular in India and has been translated into multiple language.

I recently picked up a copy and read in a couple of days. It was very engaging initially, but tended to drag a bit towards the end with lot of technical details and procedural information of his space research and missile projects.

Books

I loved the initial chapters of Wings of Fire since it gives a vision of our country during 1950-1952. Kalam was born in Rameswaram, a southern religious town in Tamil Nadu. The initial chapters provide an interesting glimpse of religious harmony which existed before India's partition.

"The famous Shiva temple, which made Rameswaram so sacred to pilgrims, was about a ten-minute walk from our house. Our locality was predominantly Muslim, but there were quite a few Hindu families too, living amicably with their Muslim neighbours."

"The high priest of Rameswaram temple, Pakshi Lakshmana Sastri, was a very close friend of my father's. One of the most vivid memories of my early childhood is of the two men, each in his traditional attire, discussing spiritual matters."

Books

One day when I was in the fifth standard at the Rameswaram Elementary School, a new teacher came to my class. I used to wear up a cap which marked me as a muslim and I always sat in the front row next to Rameswara Sastri, who wore a sacred thread.

The new teacher could not stomach a Hindu-Brahmin boy sitting with a muslim boy. In discussion with our social studies teacher, he told me to go and sit on the back bench. I felt very sad and so did Rameswara Sastri. He looked utterly dejected as I shifted to my seat in the last row with a lasting impression on me. After school, we went home & told our respective parents about the incident. Lakshmana Sastri summoned the teacher, and in my presence, told the teacher that he should not regard the notion of social inequality and communal intolerance in minds of innocent children. He bluntly asked the teacher to either apologize or quit the school and island. Not only did the teacher regret his behaviour but the strong sense of conviction Lakshmana Sastri conveyed ultimately inspired the young teacher.

Books

Kalam in younger years wanted to be an officer in air force, however he couldn't clear the interview the next round. He was aware of this failure and I found his words to Kalam interesting and in a way prophetic. "Accept your destiny and go ahead with your life. You are not destined to become an Air Force pilot. What you are destined to become is not revealed now but it is predetermined. Forget his failure, go to work, instead, for the true purpose of your existence. Become one with yourself, my son! Surrender yourself to the wish of God."

In the book we learn how Kalam started his career in Aeronautical Development Establishment (ADE) and was involved in the design of a home-craft. Later he moved to Indian Space Research which was the brain child of Vikram Sarabhai. In 1968, Kalam went to NASA facility in Maryland (USA) as part of a training program in sounding rocket launching techniques. There he saw a painting which depicted Tipu Sultan's rocket warfare against the British.

Books

"Here, I saw a painting prominently displayed in the reception lobby. It depicted a battle scene with a few rockets flying in the background. A painting with this theme should be the most commonplace thing at a flight facility, but the painting caught my eye because the address on the side launching the rockets were not white but dark-skinned with the sacred features of people found in South Asia. One day my curiosity got the better of me, drawing me towards the painting. It turned out to be Tipu Sultan's army fighting the British. The painting depicted a fact forgotten in Tipu's own country but commemorated here on the other side of the planet. I was happy to see an Indian glorified by NASA as a hero of warfare society."

The book covers a lot of "behind the scene" information and technical details about India's missile and missile program. This might interest technically inclined readers but it does not put off readers who bought the book to get know Kalam or to know his personality/ideas. Space and missile programs are huge complex projects and managing them is extremely challenging.

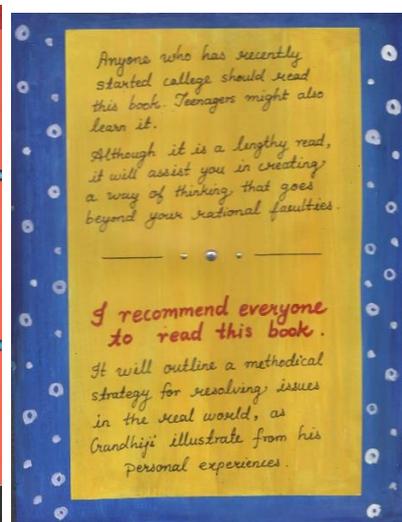

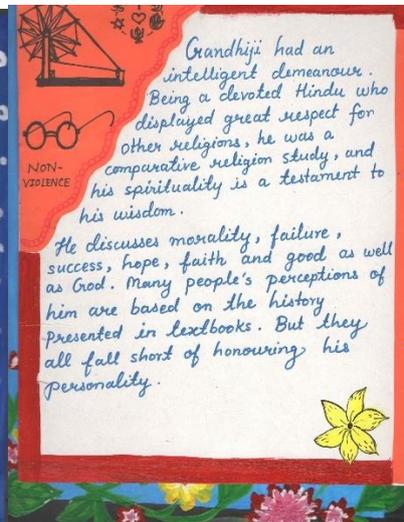

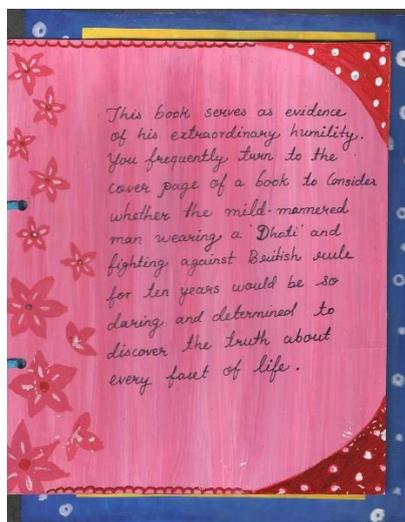

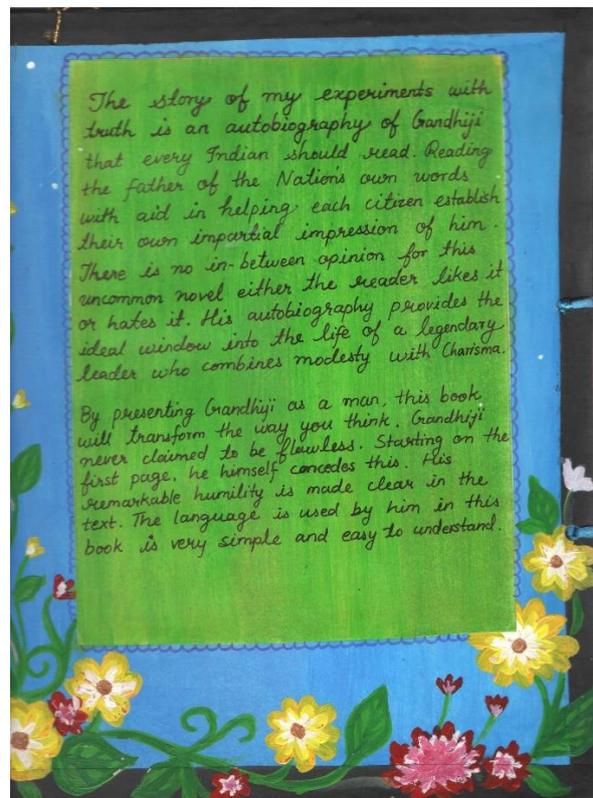

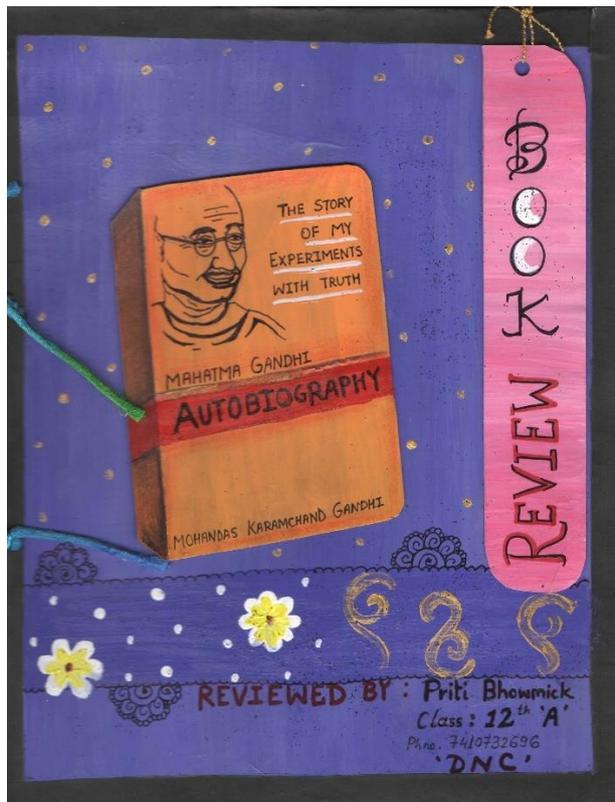

Books

Wings of Fire covers Kalam's personal life only briefly which is strange for an autobiography. For example, we don't know why he decided to abandon rocket or his activities outside space research. Even though we can conclude at the end that he was devoted to science and technology.

Though Wings of Fire, we can access some excellent people who worked behind Indian space research such as Vikram Sarabhai and Dr. Bhanu Prasad. The book also contains about 20 photos and I found the one from the early days of Indian space program very interesting. That alone is worth the price of the book.

One of the things that stands out throughout the book is Kalam's positive thinking. He held many high ranking positions in various organizations. Yet in the book he rarely mention anything about anything / description of his various assignments. The secret to his success seems to be his ability to ignore negative things around him. The book also gives a clue to his popularity in India. Kalam is a

Summary

Childhood and Adolescence

In this first part of "An Autobiography: The Story of My Experiments with Truth" Gandhi tells about his birth, childhood, religion, marriage, and all the experiences and tragedies that occurred during this period.

Gandhi was born on October 2, 1869 in Porbandar, an Indian city. As a child, he was totally influenced by the practices of his religious-political father and his devoted mother.

When his father died, a friend of the family suggested that Gandhi should study in England. To do so, he had to make serious promises to his mother, because her greatest concern was that he would lose his cultural and start eating meat, alcohol & sleeping with other women.

Early Congress

After his mother died, he started his professional life. He began working in Bombay at the supreme court. There he gained experience & deepened his studies in law.

During his time in south Africa, Gandhi suffered from various discriminations because of his skin colour. When he was kicked out of the train and when he was invited to dine in his room to not offend the guests in the hotel. In those moments, he said that he always discussed the situation, but without violence. During the experience, he gained confidence in himself and acquired great knowledge.

Soon after, he returned to India with purpose of picking up his wife & daughters and taking to south Africa where he continued his work as activists.

Developments of Political

When he arrived at the post of South Africa, the white citizen were furious with him and attacked him. But Gandhi proved his innocence to the press and said he did not

When the war was coming to an end, Gandhi's next step was to live the lives of the poorest people, practicing fasting and eating a restricted diet that contained only fruit.

During all this time in Africa, Gandhi developed what would be called "Satyagraha". It translates as "holding onto truth" and refers to non-violence.

The Peak of His Political Power

In 1914, Gandhi returned to India and made major changes there, he opened primary schools in six villages and improved their sanitary condition. He also showed the "Satyagraha" in India.

With that, Gandhi's great entry into Congressional politics took place, leading to the new constitution that boosted the country's complete independence.

Gandhi says that his achievements in Congress still left history unrewritten with nothing final.

Now, history confirms that Indian independence has been successful and influenced movements for egalitarian right around the world.

Moral Value of This Book

Forgiveness :- Gandhi practiced it simply and directly. Not to forgive is to be stuck in the past, causing only suffering.

Commitment :- For Gandhi, the main commitment that can exist is with the truth itself, as it leads to happiness and fulfillment, without needing external approval.

Respect :- Choose non-violence, both in physical form as well as through discussion and judgments. We cannot see our opponents as enemies.

Love :- Gandhi never showed changes in his mood, always remaining calm and loving everything.
